

EAST SPRUCE DESIGN BUILD

Website Redesign Overview

Product Requirements Document

Version 1.0 · February 2026

Project	East Spruce Design Build — Website Redesign
Version	1.0 (Phase 1 Foundation)
Date	February 2026
Owner	Elliot Nolter, East Spruce Design Build (ESDB)
Prepared by	Joseph Pascucci, Three Rings Enterprises (3RE)
Status	Draft — Awaiting Designer Review

1. Overview

1.1 Purpose

This Product Requirements Document (PRD) defines the pages, content, and functional requirements for the redesign of eastspruce.com. It is the primary handoff document for the web designer, serving as the single source of truth for what to build, why it matters, and what success looks like.

1.2 Business Context

East Spruce Design Build is an architecture, design/build, and sustainability consulting studio based in Bethlehem, Pennsylvania. Founded in 2018 by Elliot Nolter (RA, CPHC, SHP), the studio specializes in sustainable, high-performance buildings ranging from residential renovations and additions to new construction, Passive House design, and commercial adaptive reuse.

The studio is entering a deliberate growth phase in partnership with 3RE, a marketing and business development collaborator. Phase 1 of that plan centers on establishing a strong digital foundation — a website that converts qualified visitors into consultation requests, positions ESDB as the expert on sustainable design/build in the Lehigh Valley and surrounding region, and supports every downstream marketing and sales effort.

1.3 Primary Goal

The redesigned website's single most important job is to convert prospective clients, directing them to the appropriate product/service. This may be a qualified consultation requests from homeowners and developers, a paid plan set download, or a free educational download. Every page, section, and call to action should be evaluated against this goal.

1.4 Target Audience

- Homeowners in the Lehigh Valley, Pocono Mountains, and surrounding PA/NJ/NY region planning a major renovation, addition, or new home
- Property owners interested in sustainable or high-performance building upgrades
- Developers or commercial property owners exploring adaptive reuse, mixed-use, multi-family or tenant fit-out
- Architects and engineers seeking sustainability consulting (secondary audience)
- Prospective contractor partners (tertiary audience)

1.5 Current Site Assessment

The existing site at www.eastspruce.com is a Wordpress build with four main nav pages: Services, Portfolio, About Us, and Work With Us. Key gaps to address in the redesign:

- No clear lead-qualification messaging — the site doesn't help visitors self-select as a good fit
 - No description of the end-to-end client journey or what working with ESDB looks like
 - Limited SEO structure; no blog or resource content
 - No social proof — no testimonials, reviews, or project outcome metrics
 - Contact/intake is a simple form with no qualification layer
-

2. Design Principles & Constraints

2.1 Brand Voice

- Confident and expert, but never arrogant — ESDB is the knowledgeable guide, not the flashy salesperson
- Grounded and values-driven — sustainability is not a feature, it's a belief system
- Craft-forward — words like resourceful, intentional, honest, artfully-crafted and durable reflect the work
- Human and personal — Elliot's story and philosophy are a differentiator
- Thought leader in low tech sustainability, re-use, and resourcefulness

2.2 Visual Direction

- Clean, minimal aesthetic consistent with high-end design/build firms
- Generous white space, strong typographic hierarchy
- Photography should do the heavy lifting — large, high-quality project images
- Existing brand assets (logo, teal/dark color palette) should be carried forward
- Avoid design-trend clichés common in general contractors; lean into the architecture studio aesthetic

2.3 Technical Constraints

- Platform: Wordpress
 - Mobile-first responsive design required
 - Contact and intake forms must integrate with ESDB's CRM (TBD, likely HubSpot or similar)
 - Blog/resource section must support ongoing content publishing with minimal friction
 - Basic on-page SEO structure required on all pages (meta titles, descriptions, H1 hierarchy, alt text)
 - Easy integration with Google Tags, Google analytics GA4, etc.
-

3. Site Structure

The redesigned site will consist of six primary pages, organized as follows:

#	Page	URL / Nav Label	Primary Goal
1	Home	/ (Home)	Orient & convert visitors
2	About / Our Story	/about	Build trust & personal connection
3	Services & Process	/services	Qualify leads, explain the model
4	Portfolio / Work	/portfolio	Demonstrate capability & taste
5	Blog / Resources	/blog	SEO, authority, nurture
6	Contact	/contact	Convert qualified leads

Navigation order in the header should follow this sequence: Work (Portfolio) → Services → About → Start a Project (CTA button, styled distinctly). A sticky header is recommended. Footer should include logo, contact info, social links (Instagram, Houzz), and navigation links.

The redesigned site will also consist of these secondary funnel pages, organized as follows:

#	Page	URL / Nav Label	Primary Goal
1	Ask The Expert	/ask-the-expert	Book a call & opt-in to email list
2	Education Video	/video	Build trust & opt-in to email list
3	Project Planning Pack	/project-planning-pack	Educate & opt-in to email list
4	Directory	/directory	??
5	Schedule a Call	/schedule	??
6	Legal		

4. Page-by-Page Specifications

See attached documents for available specs. Be creative for pages with no current spec available.
